

Q. Develop a java program to do meaningful transaction using your DB

**Main method:**

```
package _221047012;

import java.sql.Connection;
import java.sql.DriverManager;
import java.sql.PreparedStatement;
import java.sql.ResultSet;
import java.util.Scanner;
//org.h2.Driver
//jdbc:h2:tcp://localhost/e:/MyDb/sachinproductdb
public class Main {
    static Connection connection;
    public static void main(String[] args)throws Exception {
        //uncomment only to create table
        //Class.forName("org.h2.Driver");//load the driver
        //Connection connection =
        DriverManager.getConnection("jdbc:h2:tcp://localhost/e:/MyDb/sachinproductdb","sachin","#sunil@10")
        ;
        /* String connectionUrl = "jdbc:sqlserver://172.16.51.44;" +
        "databaseName=221047012;integratedSecurity=false;user=Sahana;password=sahana$215";
        connection = DriverManager.getConnection(connectionUrl);
        String sql="create table Products"+"(PID integer,Productname varchar(100),Productunitprice
        float,Quantities integer, PRIMARY KEY(PID))";
        PreparedStatement preparedStatement=connection.prepareStatement(sql);
        //Execute the query
        int n=preparedStatement.executeUpdate();
        if(n==1) {
            System.out.println("table not created");
        }
        else {
            System.out.println("table created");
        }
        preparedStatement.close();
        connection.close();*/

        Data p=new Data();
        Scanner sc=new Scanner(System.in);
        System.out.println("Enter your choice 1.insert 2.delete 3.display");
        int n1=sc.nextInt();
```

```

        if(n1==1) {
            p.insertvalues();
        }
        else if(n1==2) {
            p.deletevalues();
        }
        else if(n1==3) {
            p.displayval();
        }
    }
}

```

### **Operations:**

```

package _221047012;

```

```

import java.sql.Connection;
import java.sql.DriverManager;
import java.sql.PreparedStatement;
import java.sql.ResultSet;
import java.sql.SQLException;
import java.util.Scanner;

```

```

class Data {
    static Connection connection;
    void insertvalues() throws SQLException, ClassNotFoundException
    {
        Scanner sc=new Scanner(System.in);
        /*Class.forName("jdbc:sqlserver://localhost:1433");//load the driver
        Connection connection =
        DriverManager.getConnection("jdbc:h2:tcp://localhost/e:/MyDb/sachinproductdb", "sachin", "#sunil@10")
        ;*/
        String connectionUrl = "jdbc:sqlserver://172.16.51.44;" +
            "databaseName=221047012;integratedSecurity=false;user=Sahana;password=sahana$215";
        connection = DriverManager.getConnection(connectionUrl);
        String sql="insert into Products values (?, ?, ?, ?)";
        PreparedStatement preparedStatement=connection.prepareStatement(sql);
        System.out.println("Enter PID");
        int pid=sc.nextInt();
        preparedStatement.setInt(1, pid);
        System.out.println("Enter Product name");
    }
}

```

```

String pname=sc.next();
preparedStatement.setString(2,pname);
System.out.println("Enter Price");
float price=sc.nextFloat();
preparedStatement.setFloat(3,price);
System.out.println("Enter Quantity");
int quantity=sc.nextInt();
preparedStatement.setInt(4,quantity);
//Execute the query
int n=preparedStatement.executeUpdate();
if(n==1) {
System.out.println("record inserted");
}
else {
System.out.println("record not inserted");
}
//closing
preparedStatement.close();
connection.close();
}
void deletevalues() throws SQLException, ClassNotFoundException{
Scanner sc=new Scanner(System.in);
// TODO Auto-generated method stub
//Class.forName("org.h2.Driver");//load the driver
//make connection with DB
// Connection connection =
DriverManager.getConnection("jdbc:h2:tcp://localhost/e:/MyDb/sachinproductdb","sachin","#sunil@10")
;
String connectionUrl = "jdbc:sqlserver://172.16.51.44;" +
"databaseName=221047012;integratedSecurity=false;user=Sahana;password=sahana$215";
connection = DriverManager.getConnection(connectionUrl);
String sql="Delete from Products where PID=?";
PreparedStatement preparedStatement=connection.prepareStatement(sql);
System.out.println("Enter PID to delete Product");
int delpid=sc.nextInt();
preparedStatement.setInt(1,delpid);
int n=preparedStatement.executeUpdate();
if(n==1) {
System.out.println("deleted");
}
else {
System.out.println("not deleted");
}
preparedStatement.close();
connection.close();
}
void displayval() throws SQLException, ClassNotFoundException {

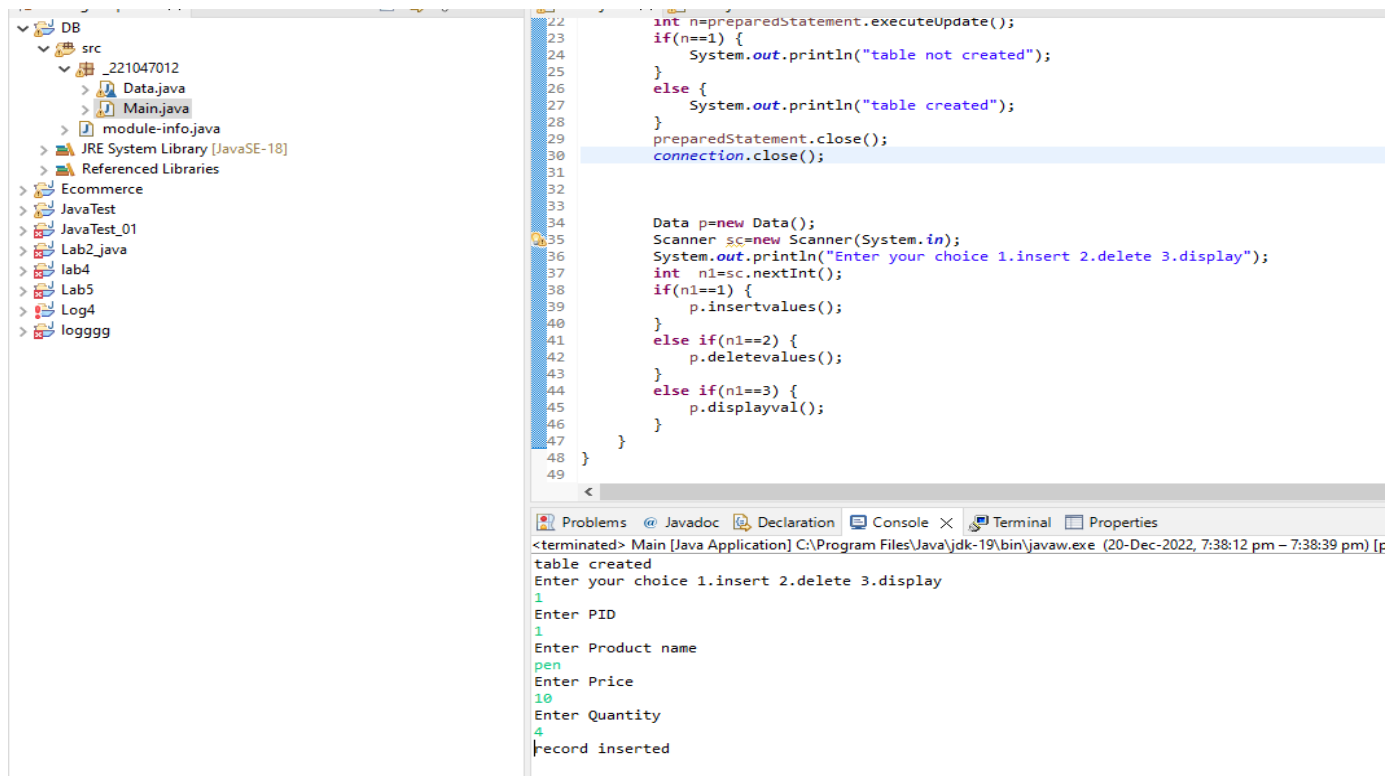

```

```

Scanner sc=new Scanner(System.in);
// TODO Auto-generated method stub
//Class.forName("org.h2.Driver");//load the driver
//make connection with DB
//Connection connection =
DriverManager.getConnection("jdbc:h2:tcp://localhost/e:/MyDb/sachinproductdb","sachin","#sunil@10")
;
String connectionUrl = "jdbc:sqlserver://172.16.51.44;" +
    "databaseName=221047012;integratedSecurity=false;user=Sahana;password=sahana$215";
connection = DriverManager.getConnection(connectionUrl);
String sql="Select * from Products";
PreparedStatement preparedStatement=connection.prepareStatement(sql);
ResultSet resultSet=preparedStatement.executeQuery();
while(resultSet.next()) {
    System.out.println(resultSet.getInt("PID")+" "+resultSet.getString("Productname")+"
"+resultSet.getFloat("Productunitprice")+" "+resultSet.getInt("Quantities"));
}
resultSet.close();
preparedStatement.close();
connection.close();
}
}

```
